All-on-4® at Smile Solutions Smile Solutions is proud to offer patients All-On-4® dental implants, the superior solution for dental implants in the permanent replacement of multiple teeth. All-On-4® implant treatment offers a solution for patients who need most or all of their remaining teeth in one or both arches replaced, leaving you with beautiful, functional and long-lasting teeth. If you have difficulty chewing food, have ill-fitting dentures, have broken teeth or are anxious about your smile, All-On-4® implants may be the treatment for you. Book a Consultation How does it work? All-On-4® dental implants work by permanently attaching a full set of artificial teeth to either one or both jawbones during a surgical procedure. The prosthesis (the set of artificial teeth attached to the implants) is designed to fit comfortably and securely in the mouth without covering the palate (roof of the mouth). This design allows for improved comfort, taste sensation, and speech clarity compared to traditional dentures that often cover the palate. Firstly implants – which are small titanium screws – are placed in the jaw. These fuse with your jawbone to create a stable, artificial tooth root to which the prosthesis – your new set of porcelain teeth – is permanently screwed. Book a Complimentary Consultation Please note this appointment is a discussion only and does not include a check-up, x-rays, scans or any other clinical treatment. A \$50 refundable deposit is required to secure the appointment. What does the procedure involve? Assessment & suitability You'll begin with a thorough medical and dental assessment to confirm your suitability for All-on-4® treatment. Implant surgery The dental implants are put in place, and the surgeon prepares your jawbone and places your implants, then one of our prosthodontists takes impressions of the implants to begin construction of your fixed bridge(s). Post-surgery recovery After surgery, you may experience mild discomfort or swelling, which typically settles within a few days. Impressions for your bridge Once the implants are placed, your specialist prosthodontist takes impressions to begin constructing your fixed bridge(s). Next-day fit & adjustments Your specialist prosthodontist and dental prosthetist check the fit of your new teeth the day after surgery and make any necessary adjustments. Final placement & aftercare Your fixed bridge is secured, and your clinician provides tailored aftercare. Suitability and outcomes vary, and alternative options may also be discussed. Start your journey today Book Now Why choose Smile Solutions for your All-on-4® dental implants? 1. Treated by a team of board-registered specialists, not a general dentist At Smile Solutions your All-on-4® dental implant treatment will be performed by one of our team

of board-registered specialist prosthodontists , periodontists , oral & maxillofacial surgeons , and dual medical qualified dental surgeons – not a general dentist providing care across multiple fields or specialists. Therefore you can rest assured you're in the safest hands. To qualify as a registered specialist in Australia, practitioners must first have the same degree as a general dentist. They then study for a further Masters degree or equivalent, or a PhD in a particular field, making them eligible to apply for registration with the Dental Board of Australia as a specialist.

2. Hand crafted ceramic teeth, not acrylic denture teeth or plastic resin teeth For your permanent fixed bridge, we principally work with ceramic material when crafting your new smile, not acrylic denture teeth or any other inferior resin (plastic) material. Ceramic is a superior option for several reasons, including better durability to ensure a longer lifespan and resistance to wear and tear, making them more cost effective in the long run. Ceramic teeth are also highly resistant to staining, which means they maintain their brightness and colour over time with proper care. Ceramic bridges closely mimics the natural translucency and texture of real teeth.

3. Titanium bar substructure for every case, not a bridge prone to fracture The titanium bar substructure plays an important role in the success and longevity of the All-on-4 dental implant bridge. Serving as a strong foundation, it securely supports the prosthetic teeth in place, distributing chewing forces evenly across the implants and preserving the underlying bone structure. This stability not only enhances the functionality of the restored teeth but also provides patients with the confidence to eat, speak, and smile without worry.

4. In-House Laboratory made in Melbourne Our in-house Smile Solutions laboratory has been set up exclusively to service our own patients. Our ceramists and lab technicians do not work with any clinicians outside of Smile Solutions, allowing them to dedicate all of their time to creating the very best work for our own patients. We do not send any of our work offshore and only purchase TGA-approved products in the manufacture of our appliances.

5. Temporary bridge in 1-2 days, and permanent bridge in 3-6 months Waiting 3-6 months for healing allows your bone and gums to recover properly after surgery before the final fabrication of the permanent bridge.

6. All-on-4® accredited practice using Swiss-Made Implants At Smile Solutions we are a certified All-on-4® clinic, using only premium All-on-4® registered products – no inferior alternatives. The All-on-4® system uses Swiss-made Nobel implants, advanced technology and proven techniques developed through extensive research and clinical studies ensuring reliability, predictability, and long-term success. The brand's commitment to ongoing innovation and continuous improvement further solidifies its reputation as a leader in implant dentistry, inspiring confidence for both clinicians and patients.

7. Procedure in a private hospital If you have private health insurance with hospital cover, your procedure can be carried out in the comfort and safety of a private hospital rather than a dental surgery. Because your treatment is performed by a specialist, you're eligible for hospital-based care, providing an added level of reassurance and comfort throughout your procedure. This is particularly important for patients who: are older or have pre-existing medical concerns have dental anxiety/phobia require complex surgery

8. Oral Maxillofacial surgeon for complex cases At Smile Solutions we utilise the services of oral & maxillofacial surgeons who works within our team for more complex treatment such as extensive bone grafting , sinus lifts and zygomatic implants.

9. Expert advice Your initial, complimentary appointment will be with an experienced registered dentist, not a sales person without any formal qualification in dentistry.

10. Technology specific to All-on-4® and implants At Smile Solutions, we continually pioneer new technologies to provide our patients with the highest quality of care. Our technology specific to All-on-4® and dental implant treatment includes: iCam 4D Implant and Scanner: Enhances accuracy and efficient by capturing detailed images for precise measurements and virtual implant placement simulations. Exocad DentalCAD Software – allows precise implant planning and visualisation for more predictable outcomes. coDiagnostix® Software – provides detailed 3D images of the jaw structure to ensure accurate implant placement and faster recovery times.

11. PF1 where we can, not PF3 In All-on-4® dentistry, "PF" stands for prosthetic framework. PF1 bridges have little to no pink and closely follow the the natural bone contours, while PF3 bridges rely on larger volumes of pink acrylic or ceramic to compensate for significant bone loss or aggressive surgical reduction. At Smile Solutions we aim for PF1 wherever possible, which means preserving bone rather than removing it unnecessarily. Achieving a PF1 outcome demands a high level of skill across the entire team: The implant surgeon must be conservative The prosthodontist must design with precision The ceramist must craft with minimal need for camouflage The result is a more natural fit, better soft tissue support, and preserved bone –

essentially if future treatment is ever needed. We don't take shortcuts; we plan for long-term health. 12. Permanent, durable and cost-effective solution with faster recovery All-on-4® implants use four titanium anchor points to securely and permanently support your new teeth, preventing the movement often experienced with traditional dentures. With fewer implants required, patients typically benefit from reduced recovery time and less discomfort. This streamlined approach also makes All-on-4® a more cost-effective alternative to replacing each tooth individually. All-on-4® is a dental implant treatment to replace missing teeth with a full arch of fixed prosthetic teeth. Results, recovery times and potential risks vary for each individual and procedure. The information provided here is general in nature and intended for those over the age of 18. Undergoing any dental or cosmetic procedure is a significant decision, and patients should seek independent advice from a qualified, AHPRA-registered practitioner before proceeding. Further details about this procedure, including potential risks, can be found here . View More Smiles Flexible Payment Plan Options Available Learn More Frequently Asked Questions How long does it take to get used to All-on-4® dental implants, and will I be able to speak normally? Adjusting to speaking with All-on-4® dental implants may initially feel different, but most people adapt quickly. The time it takes to fully adjust varies from person to person. Some people feel comfortable speaking with their implants within a few days, while others may take a few weeks. You may experience some difficulty pronouncing certain sounds or speaking clearly during the first few days or weeks. Your tongue, lips, and facial muscles will gradually adapt to the new structure of your mouth and prosthesis. Can food get under All-on-4® implants and how do I clean them? It is possible for tiny particles of food to find their way under All-on-4® dental implants. To minimise any issues, it's recommended that patients thoroughly clean around the implants and prosthesis after meals using a water flosser, interdental brushes, or dental floss. This helps remove any trapped food particles. Visit your dentist regularly for professional cleanings and to ensure the implants are in good condition. Your dentist can also address any concerns about food getting stuck. If you notice persistent issues with food getting trapped, your dentist can make adjustments to the prosthesis to improve its fit and minimise gaps where food can accumulate. Also be mindful while eating – chew slowly and carefully, and avoid overly sticky or stringy foods that are more likely to get stuck. How often should I clean my All-on-4® implants? Some ongoing maintenance is necessary for your All-On-4® dental implants. For example, a dental hygienist will need

to remove the bridge and clean your implants twice a year. Some patients require a realignment of the prosthetic bridge every five to seven years as tissues and bone change. If ceramic crowns were chosen, the porcelain is likely to need repair or replacement over time. Like natural teeth, it is important that you maintain good oral hygiene to prolong the lifespan of your implants. Brush your teeth and gums at least twice a day using a soft-bristled toothbrush and a non-abrasive toothpaste. Use gentle, circular motions to clean around the implants and along the gumline. Use dental floss or interdental brushes to clean between the implants and around the base of the prosthesis. This helps remove plaque and food debris that may accumulate in hard-to-reach areas. Consider using a water flosser (oral irrigator) to flush out food particles and debris from around the implants and under the prosthesis.

Can I eat normally with All-on-4® dental implants? With All-on-4® dental implants, you can eat a wide range of foods, similar to natural teeth. During the healing phase, stick to soft foods to avoid pressure on the implants and avoid hard or sticky foods. After full recovery, most foods are permissible, but be cautious with very hard or sticky items to prevent damage. Avoid biting directly into very hard or tough foods like apples or steak. Instead, cut them into smaller, bite-sized pieces. Chew evenly, maintain good oral hygiene, and attend regular dental check-ups. Following these guidelines can help ensure the longevity and functionality of your All-on-4® dental implants. Always consult your dentist for personalised advice.

Can anybody get All-on-4® dental implants? Most patients we see at Smile Solutions are suitable for All-On-4® dental implants. Before starting treatment, you will undergo a full dental and medical assessment by one of our clinicians to evaluate your suitability. An ideal candidate requires sufficient bone density in the jaw to support the implants. In some cases, bone grafting may be necessary to build up the bone before implants can be placed. Patients must have healthy gums be free of conditions like gum disease, which can affect the success of the implants. Good overall health is also important, as certain medical conditions (such as uncontrolled diabetes or immune disorders) and habits (like smoking) can affect healing and implant success.

How long do All-on-4® implants last? All-on-4® dental implants can last 20 years or more with proper care and maintenance. The implants themselves are designed to be permanent, while the prosthetic teeth may need to be replaced or repaired over time. Regular dental check-ups, good oral hygiene, and avoiding harmful habits like smoking can help extend the longevity of the implants.

How many teeth do you get on All-on-4® dental implants? With All-on-4® dental implants, you typically receive a full arch of 12 to 14 teeth.

Are there any downsides to All-on-4® dental implants? All-on-4® dental implants are a popular solution for patients who have lost most or all of their teeth. While this treatment offers many benefits, including stability, improved aesthetics, and functionality, not every patient is a suitable candidate. The All-on-4® procedure is complex and requires a high level of skill and experience from the dental surgeon. Full integration of the implants with the bone can take several months, during which patients must be cautious with their diet and oral hygiene. Some patients may also require bone grafting if they lack sufficient bone density to support the implants, which can increase the overall treatment time and cost.

What are the advantages of All-On-4® Dental Implants? Full-arch implant dentures have various benefits over traditional dentures, including improved ability to eat, better taste and sense of texture of food as the palate is exposed, greater comfort, improved speech and, ultimately, a more aesthetically pleasing look.

Is the All-on-4® procedure painful? There is no pain during surgery as it is performed under general anaesthetic. After surgery you may feel slight discomfort in the area, or have swelling (which can vary from patient to patient), but this typically goes away within a few days of surgery.

How effective are All-On-4® dental implants? All-On-4® dental implants has a very high success rate. Traditionally, dental implants and single implant-supported dentures require three to six months' healing time before the prosthesis can be attached to achieve oral function. By contrast, Smile Solutions' All-On-4® procedure allows this to occur almost immediately, without jeopardising the success rates of the implants.

Some of the benefits of All-On-4® treatment include: fully fixed functional teeth, long-lasting restoration, healthy-looking gums, improved appearance, easy maintenance, and the one that most patients appreciate: that they look, feel and function like real teeth.

What is the cost of All-On-4® dental implants? When you come in for your consultation, your specialist will discuss the cost of your individual treatment plan with you. As a guide, All-on-4® treatment starts from \$29,000 for a single arch, and \$54,000 for dual arch. Various factors influence the costs involved with All-On-4® dental implants. As with any dental procedure, the costs can vary with the different complexity levels for

different patients. Because part of this procedure takes place in a hospital, there will be some hospital fees, but these will be included in your initial quote, and some Medicare rebates will apply.
